Composite Solutions... Delivered Daily

We make it easy to place your orders!

How to order:

You can place your orders by phone with any of our Customer Service Representatives from 8:00am until 5:00pm Monday through Friday.

toll free: **800.281.4975**

You can email or fax your orders to us 24 hours a day 7 days a week.

email: **orders@revchem.com**

Revchem proudly serves 5 distribution locations throughout the west coast.

OUR MISSION

Revchem Composites is committed to increasing the productivity and profitability of composite fabricators.

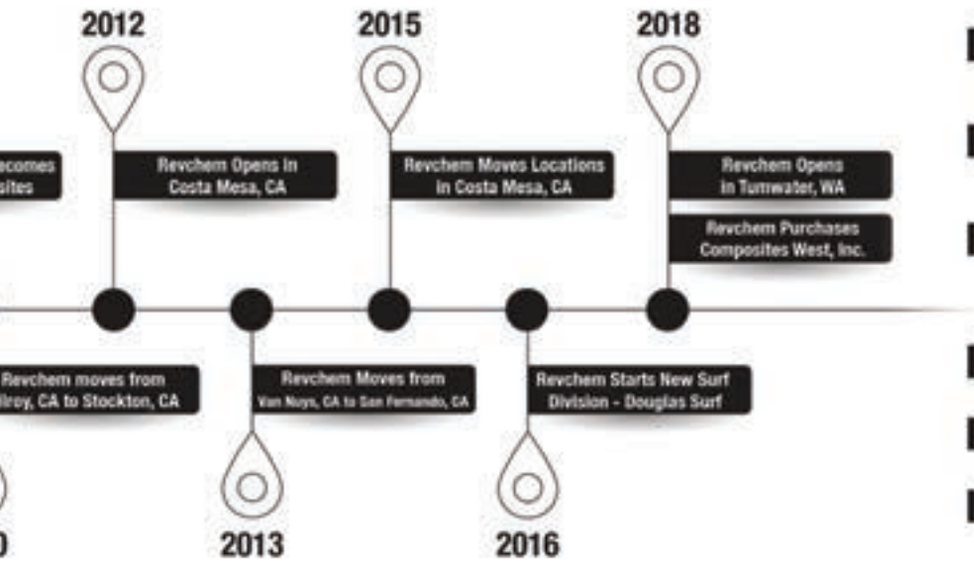
ABOUT US

Revchem Composites offers an extensive selection of materials, supplies, and equipment to the composites industry. Our extensive inventory, technical expertise, on-site support, personalized customer service and fast, flexible delivery makes us a valuable partner to the composites industry.

We carry more than 4,000 products from over 200 suppliers. Our six west coast distribution centers supply customers throughout North America, South America, Europe, and Asia.

Our technical sales team provides expert advice and on-site support. We are focused on meeting your individual needs.

For over 40 years, we have helped customers improve their processes as well as grow their businesses. We do what it takes to help keep your business profitable and relevant in today's ever-changing environment.



These core values have been a cornerstone of our success since 1975

1. Work from the "Customers for Life" perspective. Act in the best interests of our customer and the company. Our reputation for integrity is one of our most significant assets.
2. Seek to find win/win solutions. They are always more satisfying and longer lasting.
3. Practice blameless problem-solving. Treat mistakes as learning opportunities. Never place blame, it solves nothing. Ask yourself what you can start doing, stop doing, or do differently to avoid making the same error twice.
4. No Drama. Never add-on, pile-on or make things bigger than they are. It only hurts the outcome, slows the solution process, or harms others unnecessarily.
5. Give more and offer to go the extra mile. All communication between yourself and a customer should be extraordinary.
6. Under promise and over deliver. Learn to create mutually understood expectations, never over promise.
7. Honor your commitments. Do what you say you're going to do. If you are unable to achieve your commitment, communicate a new timeline before it is due.
8. Don't be a victim. Take full responsibility for your success and your failures.
9. Double-check all work. Ask others to proofread letters, e-mails, and spreadsheets for accuracy.
10. Look ahead and anticipate. Prepare for potential problems and plan for future needs. Avoid mistakes that can happen with last-minute rushing.

Composites

RESINS

EPOXY
POLYESTER
VINYL ESTER

Composite laminates use three main types of resins in the production of parts and molds: polyester, vinyl ester, and epoxy. All resins begin in a liquid form and cure into a solid. When combined with reinforcements, the resin saturates the fabric while forming into any desired shape. The reinforcement fibers provide the primary strength of a laminate, the resin transfers the load across the part and is responsible for the overall durability of the part.

PREPREGS

Prepreg is a reinforcement fabric pre-impregnated with a resin system. Typically, prepreg uses an epoxy resin system which includes a curing agent. Prepregs are ready to lay into the mold without the addition of resin. Often the laminate will require a combination of heat and pressure to cure.

CORE MATERIALS

BALSA

CORE MAT

HONEYCOMB

PVC FOAM

REINFORCED URETHANE

THERMOPLASTIC SHEET

Core materials are used in sandwich-structured composites and are fabricated by attaching two skins to a lightweight core. Core materials are often open-and closed-cell-structured foams, balsa wood, or honeycombs. Resin laminates with glass or carbon fiber-reinforcement are often used as skin materials.

GEL COATS

CLEAR GEL COATS

MARINE GEL COATS

PIGMENTS

PUTTIES

SANDING GEL COATS

TOOLING GEL COATS

Dura Technologies makes gel coats that match each customer's requirements for performance, price and styrene content. Our products include:

- High Performance Sandable Gel Coat: improved flex properties, easy to spray and easy to sand.
- Advantage Gel Coats: great performance demonstrated over years of use by satisfied customers.
- Elite Gel Coats: reduced styrene content and great weathering.
- 6000 Series Gel Coat: MACT Compliant in most colors, great weathering and blush resistance.

Dura Technologies provides fast, accurate color matching consistently within 0.3 Delta E.

DURA-KOTE GEL COAT

With over forty years of formulating experience, Dura Technologies brings precision blending techniques to the Dura-Kote gel coat product line.

Dura-Kote gel coat products are made using ISO-NPG polyester resin which offers superior resistance to fade and chalking and provides improved water resistance. Dura-Kote also incorporates bright white titanium dioxide and fade resistant, lead-free pigments which result in high-quality, fade-resistant gel coat.

Dura-Kote gel coat is created with the gel coater in mind:

- **Easy to use**
- **Resists sag**
- **Smooth leveling**
- **Consistent application**
- **Dependable quality**

SANDABLES

Dura-Kote Sandable gel coats are intended for parts that will be top coated.

Dura-Kote Sandables:

- **Can be color shade matched to minimize top coating**
- **Use first-quality pigments**
- **Reduce sanding while producing a smooth, porosity-free surface**

Dura-Kote Sandable gel coats are found in use on mass transit parts, recreational vehicles, and many other unique products.

ADVANTAGE

Advantage gel coat has an excellent track record in the fiberglass composites industry.

This gel coat offers:

- **Easy repair**
- **Dependable performance**
- **Color library with 1000's of colors, including BRIGHTS**
- **Quick match color database**

Advantage gel coats are used to produce boats and yachts, composite parts, and sanitary pieces. Compliant even in the most demanding air management districts.

ELITE

The Elite series is modified with methyl methacrylate. MMA is well known for extending the life of parts out in bright sunshine.

- **match any bright colors in the Advantage line**
- **less styrene content and improved durability**
- **ideal for many outdoor applications**

6000 MARINE

6000 Series is MACT compliance and is used by many boat and yacht builders.

- **Great weathering properties**
- **Extended resistance to blush, fade, chalking and blistering**
- **MACT Compliant for yacht and boat building**

DURA TECHNOLOGIES PROVIDES THREE LINES OF TOOLING GEL COAT

4000 Series Tooling Gel

Dependable, porosity-free workhorse. High gloss, easy to spray and lays down flat avoiding orange peel texture. Available in red, orange, black, and green.

Super Tooling

A unique blend of resins to provide enhanced air release and gloss. Available in red, orange, black, and green.

Flexible Tooling

Formulated for increased flexibility and crack resistance. Available in red, orange, black, and green.

COLOR DISCLAIMER

Gel coat matches are to color standards and maintained in the Dura-Technologies Research and Development Color Laboratory. The shades represented in this catalog are approximate. Contact your sales representative for precise color standards.

DURATEC COATINGS

SEALERS

PRIMERS

TOPCOATS

Dura Technologies manufactures the Duratec line of specialty primers and topcoats. Duratec primers are well known in the composites industry for their wide range of effective uses as well as consistent quality.

Duratec products provide effective solutions for each step in plug/pattern construction with a wide range of products, including:

Sealers

- 823A for MDF, wood or putty.
- 5604-002 for oily woods or hard-to-bond substrates

Primers:

- 707-051 Base Primer: incredibly easy to sand, provides fast fairing of patterns
- 707-061 EZ Sanding Primer: provides a fine, smooth surface for polishing or for a topcoat.
- 707-002 Surface Primer: 180° F HDT, strong, tough primer that polishes well.
- 1799-006 Vinyl Ester Primer: supreme performance up to 285° F. Polishes to a nice gloss. Strong, chemical resistant, tremendous water resistance.
- 707-019: StyroShield: forms a barrier on EPS foam, protecting the surface from styrene or solvents.

Topcoats:

- 1902-045 Vinyl Ester Primer: for a Class A pattern finish. High HDT, Super shiny, leads to a mold that is shiny from the start
- 904-061 SunShield: protects carbon fiber surfaces from sunlight and yellowing. Great weathering resistance.

SEALANT TAPES

We offer a comprehensive range of vacuum bagging consumables, available as roll stock or as engineered kits. Different customer set up will make one of these two options the best fit to their manufacturing needs. We also offer reusable vacuum bags (RVBs) made from rubber and boosting the industry's most advanced sealing systems.

MACHINABLE TOOLING MATERIALS

EPOXY
URETHANE FOAM
URETHANE TOOLING BOARD

Molds used for forming tools can be made from virtually any material. Tooling complexity, part performance requirements, surface quality requirements and the number of parts you will be producing will help guide the best tooling materials to use.

For parts cured at low temperatures, (or for prototyping, where tight control of dimensional accuracy isn't required), materials such as fiberglass, high-density foams, machinable epoxy boards or even clay or wood/plaster models often are suitable. Each material offers unique capabilities and drawbacks, and you will want to consider all your options when choosing tooling materials on a project-to-project basis.

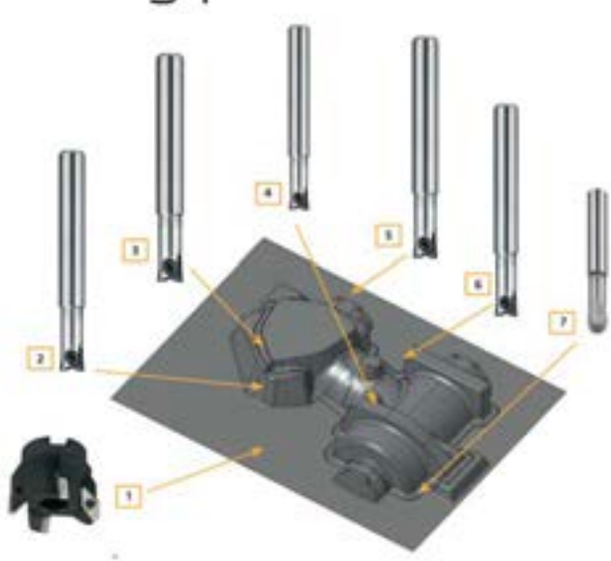
Milling parameters



CALCULATION BASIS

1. FORM SYMBOLS

- ae: Cutting Width/Line spacing
- D: Diameter
- z: Feedrate per tooth
- Vc: Cutting speed
- ap: Cutting depth
- n: Revolutions
- Vf: Feed rate
- z: Number of teeth

2. CONVERSION FORMS

$$Vc = \frac{n \cdot \pi \cdot d}{1000} \quad [m/min]$$

$$n = \frac{Vc \cdot 1000}{d \cdot \pi} \quad [1/min]$$

$$fz = \frac{vf}{z \cdot n} \quad [mm]$$

$$Vf = n \cdot fz \cdot z \quad [mm/min]$$
