307-909

Colors have been matched to existing control standards within the limits of print reproduction methods. Color is not guaranteed. "Bright Silver Metallic" is a representation of the metallic gel coat and is only shown as a representation of the available product. These swatches are provided only for use as representation of available colors when choosing standard available colors and should not be used as exact color matches. If more accurate color swatches are required, please contact your sales person directly to request gel coat samples or chip boards. Gel coat matches are to color standards and maintained in the Dura-Technologies Research and Development Color Laboratory. © 2012 Dura-Technologies, Inc. All Rights reserved. Dura-Kote is a registered trademark of Dura-Technologies, Inc.

*At Dura Technologies our mission is to provide our customers with a product that consistently performs perfectly. We strive to make your experience with us and our products as simple and smooth as possible.*

Dura-Kote gel coats are among the most vibrant and durable gel coats available in the market-place. We use high-grade raw materials to provide resistance against ultraviolet and water degradation while maintaining a high-quality finish on the visible surface.

We believe selecting your gel coat should be effortless. If you need a color that is not available in this standard color guide, we can develop the custom color just for you. If you require a color match for a repair or a special project, we can match it. We use high tech spectrophotometers to guarantee the most accurate color matching available in the industry. We know your time is valuable and that is why our typical color matching turnaround time is only three working days (excluding transit time).

We offer two lines of exterior gel coats. The Advantage line is ISO/NPG and the Elite line is an acrylic modified formulation. Both lines have been developed using high grade pigments for vivid colors and outstanding durability. In addition to these two lines, we offer specific Marine gel coats developed for the marine industry. Our exterior gel coats are manufactured in the same ISO 9001 certified facility where we produce our world famous Duratec primers and surface coatings.

Whether you just need a gallon, or you need multiple drums, our focus is to take care of your needs, efficiently, with complete quality. We pride ourselves on our ability to produce an order of any size, with accuracy, speed, and without compromising quality. To experience Dura-Kote quality and our exceptional customer service please call us today at 1(800) 281-4975.
