We make it easy to place your orders!

How to order:

You can place your orders by phone with any of our Customer Service Representatives from 8:00am until 4:30pm Monday through Friday.

toll free: **800.281.4975**

You can email or fax your orders to us 24 hours a day 7 days a week.

email: **orders@revchem.com**

fax: **909.877.8475**

Revchem proudly serves 6 distribution locations throughout the west coast.

Composite Solutions... Delivered Daily

Visit our website for our General Terms & Conditions.

OUR MISSION

Revchem Composites is committed to increasing the productivity and profitability of composite fabricators.

ABOUT US

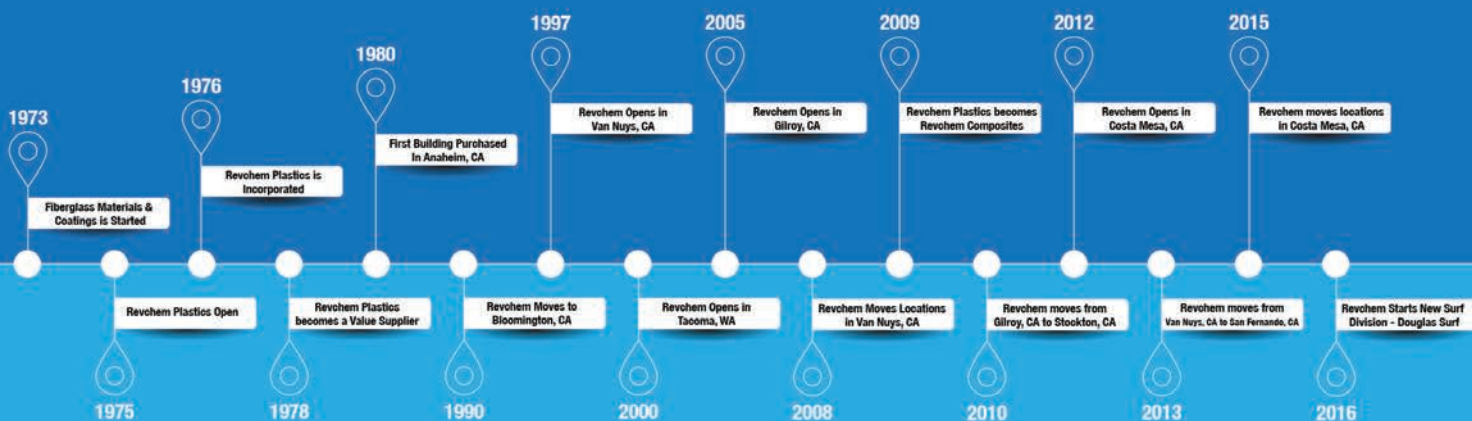

Revchem Composites offers an extensive selection of materials, supplies, and equipment to the composites industry. Our extensive inventory, technical expertise, on-site support, personalized customer service and fast, flexible delivery makes us a valuable partner to the composites industry.

We carry more than 4,000 products from over 200 suppliers. Our six west coast distribution centers supply customers throughout North America, South America, Europe, and Asia.

Our technical sales team provides expert advice and on-site support. We are focused on meeting your individual needs.

For over 40 years, we have helped customers improve their processes as well as grow their businesses. We do what it takes to help keep your business profitable and relevant in today's ever-changing environment.

***Revchem Composites has been Delivering
Composite Solutions Daily since 1975.***

RESINS

EPOXY

POLYESTER

VINYL ESTER

Composite laminates use three main types of resins in the production of parts and molds: polyester, vinyl ester, and epoxy. All resins begin in a liquid form and cure into a solid. When combined with reinforcements, the resin saturates the fabric while forming into any desired shape. The reinforcement fibers provide the primary strength of a laminate, the resin transfers the load across the part and is responsible for the overall durability of the part.

PREPREGS

Prepreg is a reinforcement fabric pre-impregnated with a resin system. Typically, prepreg uses an epoxy resin system which includes a curing agent. Prepregs are ready to lay into the mold without the addition of resin. Often the laminate will require a combination of heat and pressure to cure.

CORE MATERIALS

BALSA

CORE MAT

HONEYCOMB

PVC FOAM

REINFORCED URETHANE

THERMOPLASTIC SHEET

Core materials are used in sandwich-structured composites and are fabricated by attaching two skins to a lightweight core. Core materials are often open-and closed-cell-structured foams, balsa wood, or honeycombs. Resin laminates with glass or carbon fiber-reinforcement are often used as skin materials.

SANDING GEL COATS

TOOLING GEL COATS

Dura Technologies makes gel coats that match each customer's requirements for performance, price and styrene content. Our products include:

- High Performance Sandable Gel Coat: improved flex properties, easy to spray and easy to sand.
- Advantage Gel Coats: great performance demonstrated over years of use by satisfied customers.
- Elite Gel Coats: reduced styrene content and great weathering.
- 6000 Series Gel Coat: MACT Compliant in most colors, great weathering and blush resistance.

Dura Technologies provides fast, accurate color matching consistently within 0.3 Delta E.

Color Disclaimer

Due to 4 color print limitations we cannot guarantee that the colors represented above are an exact color of the products we offer. We strive to make our colors as accurate as possible however these printed color swatches are intended as a guide only and should not be regarded as absolutely correct. All colors are approximations of actual colors.

Dura-Kote Super Tooling:

Dura-Kote Super Tooling gel coat “all colors” is a premier tooling gel coat for critical fiber glass mold applications. Easy application and extremely low porosity make these products suitable for those applications where a higher level of performance is needed than with our standard tooling products.

- Special blend for better air release
- Easy application and rapid cure
- Excellent dimensional stability
- Enhanced gloss and ultra low porosity surface
- Excellent chemical and abrasion resistance and hardness
- Available in green, red, orange and black
- Available in 5 gal and drums

Dura-Kote 4 Series Polyester Tooling:

Dura-Kote 400 series are tooling gel coats for fiber glass mold manufacturing. Easy application and good surface properties make these products suitable for a wide range of tooling applications. Available in black, red and green, all colors are heavy metal free.

- High Gloss
- Excellent Hardness
- Excellent chemical and abrasion resistance
- Minimum distortion
- Available in Hi-Flex
- Available in green, red, orange and black
- Available in 5 gal and drums

Dura-Kote Advantage Series:

Dura-Kote Advantage gel coats offer excellent UV stability and chemical resistance. Compliant in the South Coast Air Quality Management District. Made in Southern California to meet our western region demands.

Dura-Kote 6 Series Gel Coats:

Dura-Kote Series 6 gel coat “all colors” is a line of low VOC, ISO/NPG polyester gel coat designed with a HAPs contents of less than 33 percent by weight. Marine MACT compliant in all colors. Acrylic modified for improved weathering, particularly in direct sunlight above and below the waterline.

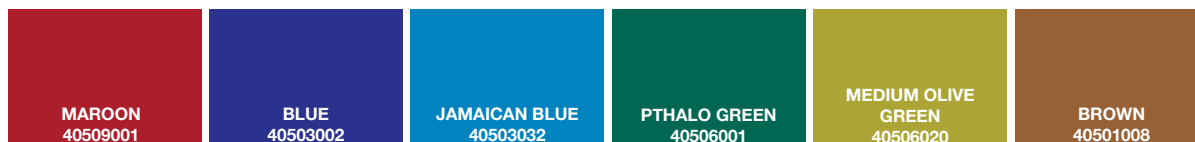

Dura-Kote 7 Series Gel Coats:

Dura-Kote 7 gel coats offer a further improvement in UV stability compared to the Advantage line without compromising other properties. Tremendous blush resistance. Highest performing gel coat line. Great weathering below the waterline. These gel coats are suitable for a wide range of applications.

SEALANT TAPES

We offer a comprehensive range of vacuum bagging consumables, available as roll stock or as engineered kits. Different customer set up will make one of these two options the best fit to their manufacturing needs. We also offer reusable vacuum bags (RVBs) made from rubber and boosting the industry's most advanced sealing systems.

MACHINABLE TOOLING MATERIALS

EPOXY

URETHANE FOAM

URETHANE TOOLING BOARD

Molds used for forming tools can be made from virtually any material. Tooling complexity, part performance requirements, surface quality requirements and the number of parts you will be producing will help guide the best tooling materials to use.

For parts cured at low temperatures, (or for prototyping, where tight control of dimensional accuracy isn't required), materials such as fiberglass, high-density foams, machinable epoxy boards or even clay or wood/plaster models often are suitable. Each material offers unique capabilities and drawbacks, and you will want to consider all your options when choosing tooling materials on a project-to-project basis.

DURATEC COATINGS

SEALERS

PRIMERS

TOPCOATS

Dura Technologies manufactures the Duratec line of specialty primers and topcoats. Duratec primers are well known in the composites industry for their wide range of effective uses as well as consistent quality.

Duratec products provide effective solutions for each step in plug/pattern construction with a wide range of products, including:

Sealers

- 823A for MDF, wood or putty.
- 5604-002 for oily woods or hard-to-bond substrates

Primers:

- 707-051 Base Primer: incredibly easy to sand, provides fast fairing of patterns
- 707-061 EZ Sanding Primer: provides a fine, smooth surface for polishing or for a topcoat.
- 707-002 Surface Primer: 180° F HDT, strong, tough primer that polishes well.
- 1799-006 Vinyl Ester Primer: supreme performance up to 285° F. Polishes to a nice gloss. Strong, chemical resistant, tremendous water resistance.
- 707-019: StyroShield: forms a barrier on EPS foam, protecting the surface from styrene or solvents.

Topcoats:

- 1902-045 Vinyl Ester Primer: for a Class A pattern finish. High HDT, Super shiny, leads to a mold that is shiny from the start
- 904-061 SunShield: protects carbon fiber surfaces from sunlight and yellowing. Great weathering resistance.
